All types of psychological disorders

How many types of psychological disorders are there. What are different types of psychological disorders.

Wikipedia Article Below is a list of mental disorders as defined by DSM and ICD. The Diagnostic and Statistical Manual of Mental Disorders (DSM) is the American Psychiatric Association's standard reference for psychiatry, which includes over 450 different definitions of mental disorders. [1] The International Classification of Diseases (ICD) published by the World Health Organization (WHO) is the international standard system for the classification of all medical diseases. [2] Also includes a section on mental and behavioural disorders. The diagnostic criteria and information in the DSM and ICD are reviewed and updated with each new release. This list contains conditions which are currently recognised as mental disorders by these two systems. There is disagreement in various fields of mental health, including the field of psychiatry, about the definitions and criteria used to outline mental disorders. Of concern to some professionals is whether certain mental disorders should be classified as "mental illnesses" or whether they would be better described as neurological disorders, or in other ways.
