Unix and linux system administration handbook 4th edition.

The authors, world-class, practical technologists offer a new indispensable coverage of platforms in the cloud, devout philosophy, continuous implementation, containerization, monitoring and many other essential topics. "I recommend this book for anyone who administers UNIX or Linux systems," DavidÃ© 15 Revisers made a similar statement "is well written, easy to read and very informative." Gary L.Ã© 15 "This edition is for those whose systems live in the cloud or in virtualized data centers; those whose administrative work greatly performs the form of automation and code source of configuration; Those who collaborate closely with developers, network engineers, compliance officers and all other working bees who live in modern hive. "Of Paul Vixie's Prologue, Hall of Innovative Fame and founder of ISC. And the safety of the distant", an author, editor and editor, never paying a lot of attention to competition, except in some cases. ROACH "12 reviewers made a similar statement" Best Linux Book I bought to date ". JoshÃ© 15 reviewers made a similar statement, we are pleased to announce the fifth editing of UNIX. And the Linux system administration manual! The book is published by Addison-Wesley Professional. Updated for new distributions and environments of the cloud, this full guide covers the best practices for each facet of the system administration, including storage management, design of the Network and administration, security, web hosting, automation, management of configuration, performance analysis, virtualization, DNS, security and management of IT service organizations. This is one Of those cases. Prologue XLII Preface XLIV Tengrades XLVI One: Bomatic Administration Chapter 1: Where to start 3 Duties System Administrator 4 Suggested Fund 6 Friction between UNIX and Linux 7 Linux distributions 9 9 Systems used in this book 10 System Specific Administration Tools 13 Notation and TypGraphic Conventions 13 Units 14 Men's Pages and Other Documement Online 16 Other Authorized Documement 18 Other sources of information 20 ways to find and install software 21 administration System under coercion 26 Recommended Reading 27 Exercises 28 Chapter 2: Scripting and The Shell 29 Basic Housing Concepts 30 Scripting Bash 37 Regular Expressions 48 Python Scripting 66 Scripting Best Practices 73 Recommended Reading 74 Exercises 76 Chapter 3: BOTTANCE AND OFF 77 BOTTAPTAPTFTING 78 BOOTING PCS 82 GRUB 82 GRUB 82 GRUB 82 GRUB: The Great Unified Start Charger 83 In the unique user mode 86 Working with start scripts 87 Booting Solaris 97 Restart and close 100 Exercises 102 Chapter 4: Access control and power powers 103 Traditional UNIX access control 104 Modern Access Control 106 Real Level Access Control 110 Pseudo Different Users 118 Exercises 119 Chapter 5: Control Proce Sses 120 Components of a process 120 The life cycle of a process 123 Signals 124 Mata: send signal Ales 127 States of Process 128 Nice and Renice: Influence of Programming Priority 129 PS: Monitoring Monitor 130 Dynamic Monitoring with Top, PStat and Topas 133 EL / Proc.
