CryptoTab Browser (Package Name: site.cryptobrowser) is developed by CryptoTab and the latest version of CryptoTab Browser Mobile 3.0.15 was updated on January 22, 2019. CryptoTab Browser Mobile is in the category of Communication. You can check all apps from the developer of CryptoTab Browser Mobile. Currently this app is for free. This app can be downloaded on Android 4.1+ on APKFab or Google Play. All APK/XAPK files on APKFab.com are original and 100% safe with fast download. CryptoTab is an easy to use, fast and secure web browser. Designed for Android, CryptoTab Mobile brings you the familiar user experience of web browser combined with additional features from CryptoTab. Extremely fast browsing allows you to open a lot of tabs at the same time, download big files in a few seconds. Manage your CryptoTab account from your mobile device - check your balance, make withdrawals at any time, invite new users to your network, etc. Add bookmarks, list of favorites, check history and keep browsing as always, but with additional CryptoTab benefits. We are doing our best to bring you well-designed product and great user experience. Please, rate our browser, we appreciate your feedbacks! Follow us in Facebook, Twitter, Telegram and VK. Minor improvements and bug fixes. Read More The best Quran app in Indonesian An experimental version of Chrome A useful manager for advertising your business on Facebook The social network for book lovers Get screen insurance for your Android device BookDesign A fun way to learn languages Check the tips on how to use CryptoTab like a pro and get the most out of it. The world of blockchain needs a fully dedicated browsing experience and are happy to introduce the world's first dedicated crypto browser, Opera Crypto Browser. Built with Web3 at its core, experience a smooth and comfortable Web3 experience An Ecosystem of Partnerships An inclusive multi-chain strategy aimed at embracing as many partnerships as possible to make crypto and Web3 seamless for our users. We have so far partnered with Polygon, Solana, Nervos, Colo, Unstoppable Domains, Handshake and ENS, and are working on even more partnerships in a truly collaborative way that reflects the spirit of the Web3 community. Crypto Corner A central space for everything crypto news related. Find the latest blockchain news, upcoming airdrop & industry event calendar, crypto communities, educational content, and so much more with just one click. A Secure Browsing Experience Make your Web3 experience safer and more secure with Opera Crypto Browser. Our free Cryptocurrency mining protection, Ad Blocker, Pop-up Blocker, and Cookie Blocker are built right into the browser for your ease of mind. Lighting Fast Browser When you first open the Opera Crypto Browser, it is instantly ready to find things on the web. With a native built-in ad blocker, Opera Crypto Browser will block intrusive ads making web pages load even faster than other mobile browsers. Looking for the desktop version? Explore web3 and control your crypto across your devices. For more info, please visit: www.opera.com/crypto/next About Opera Opera is a global web innovator headquartered in Oslo, Norway and listed on the NASDAQ stock exchange (OPRA). Founded in 1995 on the idea that everyone should be able to browse the web, we have spent the last 25+ years helping millions of people access the internet in a safe, private and innovative way. Terms & Conditions: By downloading this application, you are agreeing to the End User License Agreement at www.opera.com/eula/mobile. Also, you can learn how Opera handles and protects your data in our Privacy Statement at www.opera.com/privacy Allow Chrome to install unknown apps by going to Settings > Apps > Menu > Special access > Install unknown apps. Install a file manager (such as Cx File Explorer or File Manager) so that you can find the APK file after you download it to your phone. Download an APK file and open it to install it. Alternatively, transfer the APK file from your computer using USB. If you want to use an app from outside of the Google Play Store, you can install the app's APK file. This article explains how to install APKs on Android 7 or later. Before you can download APK files using Chrome or any other browser, you must first allow unknown apps: Go to your device settings and tap Apps & Notifications (or Apps in older versions of Android). Tap the three dots in the upper-right corner. Tap Special access. Tap Install unknown apps. Tap Chrome (or whichever web browser you use) Move Allow from this source to the On position. Now that you've configured your phone to let you install unknown apps, you'll need a way to find the application file (APK file) on your phone so that you can run it. Android phones typically come with a file manager app you can use, but if you don't have one, search for one of the best Android file managers on Google Play. For example, you can download Cx File Explorer or get File Manager. The easiest way to install an APK file on your Android is to download the file using the default browser, Chrome. Find a website offering the Android app and tap the link to download the APK file. Accept any pop-ups, including "This type of file can harm your device." Only download APK files from reputable sources. A quick Google search can often let you know if an app (or company that makes the app) has a questionable reputation. If your phone's web browser doesn't give you the option to open the file after downloading, open your file explorer app, go to the Downloads folder on your device, then tap the APK file. Allow the app any required permissions it asks for. Then, at the bottom of the installer window, tap Install. Now you'll see the app available in your list of installed apps. If you don't have internet access on your phone, or for any other reason you can't use a browser to download the file, you can still install apps from your computer. Using your computer web browser, download the APK file just like described above. Once it's downloaded, connect to your Android phone and transfer the file. If you've never connected your Android to your computer, turn on USB debugging mode on Android. You can then plug your phone into your computer with a USB cable, and it'll mount the phone like it would a memory stick. Once your phone is connected to your computer, it shows up as another drive in your computer's File Explorer. Move the APK file you downloaded from the app website to the /sdcard/download folder on your phone. Once the file is transferred, use the file explorer app on your phone as described in the previous section to tap the APK file and install the app. If you don't have a USB cable, another solution is to install WiFi FTP Server from Google Play. Then, use a free FTP client software program on your computer (for example, download FileZilla), to transfer the APK file from your computer to the /sdcard/download folder on your phone. However, this is an advanced option and requires an understanding of how to use FTP files. If the APK installer isn't running when you tap it, there's an advanced solution that might work. You can install the APK file on your Android from your computer using a tool called Minimal ADB and Fastboot. Connect your phone via USB and enable USB Debugging. Download Minimal ADB and Fastboot on your computer, and then install it. Run the tool, and a command window opens. With your phone connected to your computer with the USB cable, type the command adb devices. If the tool detects your phone, an ID for the device appears under List of devices attached. Now you're ready to transfer the APK file. Using Windows File Explorer, find the downloaded APK file on your computer. Right-click the file and select Copy. Using Windows File Explorer, navigate to the Minimal ADB and Fastboot folder (typically c:\Program Files (x86)\Minimal ADB and Fastboot). Paste the APK file into that folder. Rename the APK file to something short so that it's easy to type as a command. Back in the same command window you had open before, type the command adb install app name (replace with the name of your APK file). When you see the word Success, the app is installed on your phone. An APK (Android Package Kit) is a type of file that installs an application for Android. It's just like an executable (EXE) file for Windows or a package installer (PKG) for Mac. If you've ever installed an Android application from the Google Play store, then you've used an APK file without realizing it. When you tap the Install button, Google Play automates the process of transferring the APK file to your phone and running it for you. If the Android app you want to install isn't available on Google Play, you can download the APK file from the web and install it manually. There are many websites where you can find non-Google Play apps to install. For example, visit Apk Pure, Reddit's Apk Directory, or APKMirror. FAQ Can APK files harm your Android? Possibly. Any file you download online can contain a virus, which is why it's important to only download APKs from safe sources. Can I delete APK files on my Android? Yes. APK files are only used to install apps, so once the app is installed, you can delete the APK. What is ConfigAPK on Android? ConfigAPK comes preloaded on Android devices. It's used to run APK files and install apps. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! VPN APK might sound like a complex term, but in reality, it just describes VPN technology that's compatible with Android devices. The best VPN services provide options for all operating systems, but it's important to check that the option you choose offers this level of compatibility. In this article, we explain what APK is, how it can enable you to install a VPN on your Android device, and the protection it offers. Read on to learn how to benefit from an extra layer of security and privacy when using your Android phone or tablet. What is an APK? APK (Android Package Kit) is a file format that's compatible with Android devices. APK files are used for sideloading apps - those not typically listed on the Google Play store. They are available via third-party vendors and, as a result, may contain malicious content. For this reason, you need to be extra vigilant before downloading an APK file. Do your due diligence and check the legitimacy of the VPN vendor site before downloading the APK file. (Image credit: Shutterstock) Why do I need an APK file for an Android VPN? When you visit a VPN provider's website, you'll see that there are multiple download options. These options have specific software that's compatible with particular operating systems, and each will have a different file extension. For example, Apple iOS files typically end in .ipa. Unless you use a compatible file type on your Android device, you can't access all the security and anonymity features provided by VPN technology. APK is the file extension that's compatible with Android VPNs. Most legitimate VPN providers will make it easy for you to locate and download the APK file for your Android device. You'll usually see a range of options for compatible operating systems. Just follow the instructions to download and install the technology as you would any other app. Try out our pick for the best vpn! What are the benefits of VPN APK? Typically, a VPN that's compatible with Android devices will provide you with the same level of privacy and protection that you might receive when downloading a VPN for another device or operating system. A VPN offers an extra layer of security when browsing online. It also enables you to access geo-restricted content such as region-specific content streaming services, and makes it possible to access the internet anonymously. Online anonymity provides many legitimate benefits, such as data protection and the avoidance of targeted marketing and ad tracking. APK enables VPN providers to offer Android users the same benefits that other users on different operating systems enjoy. Of course, these benefits can sometimes come with drawbacks if the technology you download is unsafe, so always do your research before committing to a provider. There are lots of free providers for VPNs out there, but you must be extra vigilant before signing up to a free service as there is often less regulatory oversight. You should also weigh up whether a free VPN is right for your requirements as, more often than not, a free VPN provider offers a very limited service. In search of more info about VPNs
