How to unlock bootloader without pc redmi note 3.

For all Android devices from 6.0 to 10.0 without a bootloader unlocking and restore without a PC All Devices No Kingroot No problem New App For Android Android Device Link Kingoroot Link is here | "] any problem to tell me on facebook name = kashif ali khan and my mobile phone no. + 916306868361hey guys today I'm showing you that how to unlock the unlocked unloader without pc and without root, if you like this video, subscribe to my channel. Link: [https://en.mii.com/unlock/download\\_en.html](https://en.mii.com/unlock/download_en.html) link apk: brave browser: <https://brave.com/blo342> es file explorer: <https://es-file-explorer.en.uptown.com/> android #unlockbootloader #mibootloader #mii contact me: [secure e-mail] How to unlock the unlock no PC NÂ © root 2nd video note : Å ç à,~ | Read more, à € I think you are that guy who wants to know more about your phone and explore it. So here I am with the last trick to unlock the bootloader of your Android phone with PC e even without a PC. Read my complete article to get an adequate knowledge of the bootloader. In this blog, you will know, a bootloader is also popular as bo OT manager. The work of him is Å ç à ~ "when the phone is your start, manage the operating system". All operating system data is stored in the internal memory and the bootloader is managing everything. When you buy a mobile phone, you get a free internal memory with it, and this is the ROM. When we talk about computers, we can change are the operating system in Windows 8 to Windows 10. You can do it manually with disks, or USB drivers. Similarly, we can update the operating system of our mobile phone (ROM) from any version to anyone. So, every smartphone seller wants their user to use only the pre-installed operating system yet so here comes the bootloader, it works is to check the Roma (OS) that everything is ok or not. It's like when you enter an airport and you have to pass security check before entering, in the same way, our cell phone has a security check in the form of bootloader. Now, there is a unlocked bootloader and a blocked bootloader. The unlocked bootloader allows us to manually change our operating system. It means we can install custom ROMs when the bootloader is unlocked. But a blocked bootloader does not allow us to change the operating system and install custom ROM. What is the bootloader? There are many advantages of the unlocked bootloader, we check it one by one. You can manually install any operating system >> In a blocked bootloader we are unable to manually install another operating system without updating the company. But when we unlocked our bootloader, we can manually install any operating system without officially updating. We can flash the custom ROM >> This means that we can install the personalized recovery and for this, we can flash the custom ROM. It means that we can apply that manual operating system, in technical language it is called to flash that custom operating system (ROM). I think these are the main advantages of the unlocked bootloader and because of these only, most people are unlocking their bootloader. There are always two sides of the coin, so here is some disadvantages, we check it from one by one to one. You must say goodbye to the warranty >> After unlocking the bootloader, the phone warranty is because the manufacturer of our phone does not allow you to unlock that bootloader. No update officially arrives >> After unlocking that you can manually install the operating system but your smartphone company will not give you an official update. Security problems >> your bootloader It does not display your private data à €
