# Tasmanian tiger ielts answer

Tasmanian tiger ielts reading answers.

We require a deposit (the balance will then be payable on the day of your trip). "Danger," says the sign on the door of a laboratory at the Australian Museum in Sydney: "Tasmanian Tiger, Trespassers will be eaten!" The joke is that the Tasmanian tiger—a beloved symbol of the island state that appears on its license plate—has been extinct for nearly seven decades. Write your answers in boxes 14-19 on your answer sheet. Your booking will not be confirmed until we have received your deposit. For millions of years, Tasmanian tiger used to live widely in the continent of 15 ..... This past April, scientists from ACT, Trans Ova Genetics of Sioux Center, Iowa, and the Zoological Society of San Diego announced they had cloned a banteng, an endangered wild bovine species native to Southeast Asia, using a domesticated cow as a surrogate mother. For some carnivores, says University of Louisville behavioral ecologist Lee Dugatkin, "it's clear that young individuals learn various hunting strategies from parents." And a foster parent might not fill the gap. Another concern touches on the great nature-nurture quandary: Would a cloned thylacine truly represent the species, given that it would not have had the chance to learn key behaviors from other thylacines? Your deposit must be received within 10 days of making the booking. If you cancel more than 8 days prior to your booking, we will refund your deposit in full. Eventually, thylacines remained only on the dingo-free island of Tasmania, south of the mainland. The DNA that makes up the chromosomes in which genes are bundled falls apart after a cell dies. and a pouch. Then, using a technique called polymerase chain reaction, the researchers found that the thylacine DNA fragments could be copied. But with the arrival of European settlers in the 1800s, the marsupial's days were numbered. Dugatkin asks whether a cloned Tasmanian tiger raised by a surrogate Tasmanian devil would just be a devil in tiger's clothing. B To show how scientists try to conduct some researches on saving extinct animals, where there were no dingoes raised the issue with a geneticist. But it may be within reach in several years, he adds: "This area of genetics is moving forward at an exponential rate." G In Australia, critics say the millions of dollars that the thylacine project will cost would be better spent trying to save endangered species and disappearing habitats. Females carried their young in backward-facing pouches. The lights are dimmed to enable passengers to view the glow worms. H But Archer says, in effect, a thylacine is a thylacine, however its DNA blueprint is obtained, because much animal behavior, including that of marsupials, is genetically hardwired or instinctual. And Archer, who envisions nature preserves populated by cloned thylacines and their offspring, says the project is actually a boon to conservation: it shows what it takes just to contemplate resurrecting a vanished species. The challenge? For now, Archer and coworkers are trying to piece together the thylacine's exact genetic makeup. After that time, no refund will be given although we may be able to reschedule for another day. Results are being recorded. Jump on board the Thorn Brook Rain Forest Express train and have a family adventure on a narrow gauge railway into the Whean Ranges, were you can see glow worms and amazing rainforests before relaxing with a picnic near the Huia Dam. The scientists next have to collect millions of DNA bits and pieces and create a "library" of the possibly tens of thousands of thylacine genes—a gargantuan task, they concede. But researchers behind that door are working to bring the animal back to life by cloning it, using DNA extracted from specimens preserved decades ago. One opponent, Tasmanian senator and former Australia Wilderness Society Director Bob Brown, says people might become blasé about conservation if they're lulled into thinking a lost species can always be resurrected. Questions Questions 14-19 Complete the following summary of the paragraphs of Reading Passage, using no more than three words from the Reading Passage for each answer. A lone Tasmanian tiger huddled in his—or her—open enclosure at Hobart Zoo. Blamed (often wrongly) for killing livestock, the animals were hunted indiscriminately. The government gave orders to get rid of thylacines as 18 ..... Questions 20-25 Use the information in the passage to match the people (listed A-F) with opinions or deeds below. Your time: Time has elapsed You have reached 0 of 0 point(s), (0) Earned Point(s): 0 of 0, (0) 0 Essay(s) Pending (Possible Point(s): 0) Current Review Answered Correct Incorrect Read the texts and answer the questions. In 2001, Advanced Cell Technology (ACT) of Worcester, Massachusetts, succeeded in cloning, for the first time, an endangered animal, a rare wild ox

called a gaur. You must first complete the following: Exercise / Test is complete. Maternity and paternity leave Statutory Maternity Leave is for 52 weeks, unless you are entitled to more. E Such cross-species cloning, as the procedure is called, is no longer possible. Archer's goal is even more ambitious: cloning an animal with DNA from long-dead cells, reminiscent of the sci-fi novel and movie Jurassic Park. Have been employed continuously by the company at least 26 weeks before the baby is due The leave is taken on or after the day the baby is born Paternity leave has to finish within 56 days of the baby being born. Please be aware of this if you suffer Nyctophobia (fear of the dark), or are claustrophobic (have a fear of confined spaces). Hence you can not start it again. Sorry, we have no credit card facilities. Thylacines, once spread throughout mainland Australia and as far north as New Guinea, were probably outcompeted for food by the dingoes ( 猎狗 ) that humans introduced to the area some 4,000 years ago, says Australian Museum director Mike Archer, founder of the cloning project. ago; they afterwards survived in 17 ..... Still, an even greater obstacle looms, that of stitching all those DNA fragments together properly into functioning chromosomes; the scientists don't know how many chromosomes a thylacine had, but suspect that, like related marsupials, it had 14. F Many scientists are skeptical of the thylacine project. The response was derisive laughter." C Then, in 1996, Dolly the sheep burst onto the scene and, suddenly, Archer says, "cloning wasn't just a madman's dream." Dolly proved that DNA from an ordinary animal cell—in her case, a ewe's udder—could generate a virtually identical copy, or clone, of the animal after the DNA was inserted into a treated egg, which was implanted in a womb and carried to term. \*2 Conditions for group bookings: Minimum group is 7 or more people. Travelling on a miniature train, you get to travel over wooden bridges, through numerous tunnels, view ancient forest and look out over the Corille Harbour. Write your answers in boxes 26-27 on your answer sheet. 26 which of the animal has NOT been cloned as mentioned in the passage A an ox called a gaur. The animal had large, powerful jaws, which secured the predator a place atop the local food chain. NB you may use any letter more than once A Mike Archer B Don Colgan and Karen Firestone C Ian Lewis D Robert Lanza E Bob Brown F Lee Dugatkin List of Statement 20 proved that the thylacine DNA fragments could be copied 21 a cloned Tasmanian tiger raised by a surrogate Tasmanian devil would preserves the nature and not just be a devil in tiger's clothing 22 cloning an animal from fragment of DNA is bound to fail by current—day science yet hold a future 23 Conservation endeavour may be put in danger if misconception that everything can be rebuilt prevails 24 to reconstruct the animal and compensate for the loss that had been killed out partly by human beings 25 a carnivore's foster parent can not teach young individuals their total nature Questions 26-27 Choose the correct letter, A,B,C or D. With nowhere to shelter from the cold and no keepers to care, the delicately striped animal died. The government made thylacines a protected species in 1936, but it was too late; it was a frigid winter night in 1936, wrongly considered they posed threat to their livestock. B a sheep called Dolly C a wild bovine called a banteng D a mammoth called a bucardo 27 What is the main idea of this article? Prices and timetable may change without prior notice. If the trip is cancelled due to weather or operational reasons, we will refund your deposit in full General information Method of payment is either cash or cheque. But no scientist has ever synthesized a mammalian chromosome from scratch. D Researchers working with Don Colgan, head of the museum's evolutionary biology department, extracted DNA from a thylacine pup preserved in alcohol in 1866, and biologist Karen Firestone obtained additional thylacine DNA from a tooth and a bone. We take kittens and raise them with humans, but they still behave like cats," he points out. Yet its striped coat was cat-like, which runs nearly shoulder to tail. before the arrival of dingoes approximately 16 ..... A The Tasmanian tiger's Latin designation, Thylacinus cynocephalus, or "dogheaded pouched-dog," makes it redundantly clear that the marsupial's feline nickname is a misnomer. If the Aussie scientists accomplish those feats, they may try to generate a thylacine by placing the synthetic chromosomes into a treated egg cell of a related species—say, a Tasmanian devil, another carnivorous marsupial—and implant the egg in a surrogate mother. "It jarred me and started me thinking," recalls the 58-year-old paleontologist and zoologist, who received his undergraduate degree from Princeton University and his doctorate from the University of Western Australia. IMPORTANT NOTE: The train line passes through two tunnels, one of which is 0.7km long. C To come up with some ideas about how Tasmanian could have survived. Last , the thylacinus cynocephalus had become extinct when last living specimen died in 19 ..... B The Australian researchers set out to bring the animal back partly to atone for humanity's role in its extinction, Archer says. Other scientists hope to clone a woolly mammoth from 20,000-year-old specimens found in Siberian permafrost. Write the appropriate letters A-F in boxes 20-25 on your answer sheet. You have already completed the exercise / test before. Ian Lewis, technology development manager at Genetics Australia Cooperative Ltd., in Bacchus Marsh, Victoria, Australia, says the chances of cloning an animal from "snippets" of DNA are "fanciful." Robert Lanza, ACT's medical director and vice president, says cloning a thylacine is beyond existing science. The idea took root 15 years ago when he saw a pickled thylacine pup in the museum's collection. Among other things, the work raises questions about the nature of extinction itself. What's more, with the passing into extinction of the Tasmanian tiger, Thylacinus cynocephalus, it was the end of the line for an entire family of marsupials that had lived in Australia for millions of years. The research "feeds the mind-set that science will fix everything," he says. Type your answers in the spaces provided. D To show what controversy in science concerning the cloning Answers Tasmanian tiger Extinction Is Forever answers Cambridge ielts 1-16 reading test solutions Cambridge IELTS Reading KEYWORDS Table IELTS Reading Practice Test Tasmanian tiger Extinction Is Forever. Exercise / Test is loading... You must sign in or sign up to start the exercise / test. Please report no later than 15 minutes before departure Please note: booking is essential. Summary Tasmanian tiger is a dog headed animal with a catlike 14 ..... A To show a research concerning the causes of the extinction of Tasmanian tiger, in the year of 1936. When this solitary animal—whose sex was not even recorded because of lack of interest—died, so did an entire species, the last specimen reportedly died in captivity the same year. "DNA is the recipe for making a creature. Meanwhile, researchers in Spain are trying to clone an extinct mountain goat, called a bucardo, using cells collected and frozen before the species' last member died in 2000. To claim maternity leave, you must satisfy the following requirements: notify the company in writing 28 days before the commencement of the leave have been employed continuously by the company at least 26 weeks before the baby is due leave can only be taken 11 weeks before the week your baby is due If you are a father-to-be or you will be responsible with the mother for bringing up a child, you could have the right to paternity leave and pay, providing you meet the following requirements: You must be taking the time off to support the mother or carer for the baby and intend to be fully involved in their upbringing. Prices\*1 Adults £10.00 Children (6 – 15 years) £5.00 Infants (0-5 years) FREE Senior citizens £5.00 Group bookings (the whole train)\*2 Please contact us for pricing \*1 Prices entitle the passenger to one return ride on the Thorn Brook Rain Forest Express. To avoid disappointment, please book at least 2 weeks in advance. So if there is DNA preserved in the specimen, why shouldn't we begin to use technology to read that information, and then in some way use that information to reconstruct the animal?
