Antihyperglycemic Therapy for Type 2 Diabetes Mellitus						
Healthy eating, weight control, increased physical activity, and diabetes education						
Monotherapy	Metformin	High	Low	Low	Low	Low
Efficacy	High	High	Intermediate	Intermediate	High	High
Hypoglycemia risk	Low	Low	Low	Low	Low	Low
Weight	Neutral	Neutral	Neutral	Neutral	Neutral	Neutral
Adverse effects	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)
Cost	Low	Low	Low	Low	Low	Low
If A1C target not achieved after three months of monotherapy, proceed to two-drug combination (order not meant to denote any specific preference; choice dependent on a variety of patient and disease-specific factors)						
Dual therapy	Metformin + SGLT2 inhibitor	Metformin + DPP-4 inhibitor	Metformin + SGLT2 inhibitor	Metformin + SGLT2 inhibitor	Metformin + SGLT2 inhibitor	Metformin + SGLT2 inhibitor
Efficacy	High	High	Intermediate	Intermediate	High	High
Hypoglycemia risk	Low	Low	Low	Low	Low	Low
Weight	Low	Low	Low	Low	Low	Low
Adverse effects	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)
Cost	Low	Low	Low	Low	Low	Low
If A1C target not achieved after three months of dual therapy, proceed to three-drug combination (order not meant to denote any specific preference; choice dependent on a variety of patient and disease-specific factors)						
Triple therapy	Metformin + SGLT2 inhibitor + DPP-4 inhibitor	Metformin + SGLT2 inhibitor + DPP-4 inhibitor	Metformin + SGLT2 inhibitor + DPP-4 inhibitor	Metformin + SGLT2 inhibitor + DPP-4 inhibitor	Metformin + SGLT2 inhibitor + DPP-4 inhibitor	Metformin + SGLT2 inhibitor + DPP-4 inhibitor
Efficacy	High	High	Intermediate	Intermediate	High	High
Hypoglycemia risk	Low	Low	Low	Low	Low	Low
Weight	Low	Low	Low	Low	Low	Low
Adverse effects	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)	Common (GI, acidosis)
Cost	Low	Low	Low	Low	Low	Low
If A1C target not achieved after three months of triple therapy and patient T2D monitoring and combination, move to insulin (I2 receiving GLP-1 receptor agonist, add basal insulin, or I3 receiving an optimally titrated basal insulin, add GLP-1 receptor agonist or insulin, or insulin, consider adding TZD or an SGLT2 inhibitor)						
Combination insulin therapy	Metformin + basal insulin + mealtime insulin + GLP-1 receptor agonist	Metformin + basal insulin + mealtime insulin + GLP-1 receptor agonist	Metformin + basal insulin + mealtime insulin + GLP-1 receptor agonist	Metformin + basal insulin + mealtime insulin + GLP-1 receptor agonist	Metformin + basal insulin + mealtime insulin + GLP-1 receptor agonist	Metformin + basal insulin + mealtime insulin + GLP-1 receptor agonist
Consider starting at this stage when A1C is ≥ 3.0% Consider starting at this stage when blood glucose is > 300 to 350 mg per dL (16.7 to 19.4 mmol per L) and/or A1C is ≥ 3.0% to 3.5%, especially if symptomatic or labile, because in patients who can't take basal insulin plus mealtime insulin is the preferred initial approach						

## Diabetes Health Record

Discuss these Basic Guidelines for Diabetes Care with your diabetes care provider and use this record to track your results. Fill in 14 days your results.

Take charge of your diabetes!
