English language expressing skepticism Pliny the Elder's Naturalis Historia could be the source of the sentence. Taking something with a "grain of salt" is an English saying that suggests looking at something, specifically statements that may be misleading or untrue, with skepticism or not interpreting something literally.[1] In the old British units of weight, a grain weighs about 65 milligrams, which is about the amount of table salt that a person could pick up between his fingers like a pinch. History Hypotheses about the origin of the phrase include Pliny the Elder's Naturalis Historia, about the discovery of a recipe for an antidote to poison.[2] In the antidote, one of the ingredients was a grain of salt. Threats concerning the poison had to be taken "with the grain of salt", and therefore less seriously. The phrase cum grano salis ("with a grain of salt") is not what Pliny wrote. It is built according to the grammar of modern European languages rather than classical Latin. Pliny's present words were added salis wheat ("after adding a grain of salt"). According to another version, the Roman general Pompey believed he could make himself immune to the poison by ingesting small amounts of various poisons, and took it with a grain of salt to help him swallow the poison. In this version, salt is not the antidote. He was only taken to help swallow the poison. The Latin word sal (salis is the genitive) means both "salt" and "cunning", so the Latin phrase cum wheat salis could be translated either "with a grain of salt" or "with a grain (small amount) of spirit", actually "with caution." [3] The phrase is typically said "with a pinch of salt" in British English and said "with a grain of salt" in American English.[4] References ^ Webster's New World College Dictionary ^ A"Take with a grain of salt". www.phrases.org.uk. ^ Book 23: LXXVI: 14 9. One of the arguments in support of this thesis is that few people, except those with a particular linguistic interest, will know where a language comes from. This should apply to all idioms of any language. The second argument is that the whole question of language is making your point of view clear. This means that maneuvers are not only, but must and often must be used to convey a desired message.
