Video is the most powerful, pervasive, and performance-oriented media these days. No wonder then that everyone wants to upload videos to share on their sites, or on social media, or even upload via YouTube. In fact, many videos end up on your phone these days as attachments for WhatsApp and other social chat platforms. The problem though is the actual creation. Video creation is a time-consuming process and is not typically very easy to achieve when you want high-quality results. Our review product, Wondershare Filmora can help. Let us explore Filmora, a quick video creation tool from Wondershare. Something went wrong. Wait a moment and try again. According to WordStream, 1/3 of online activity involves watching video. 51.9% of marketing professionals worldwide name video as the type of content with the best return on investment (HubSpot). In fact, social video generates 1200% more shares than text and images combined (HubSpot). Just what a blogger and business owner wants to hear. Want to get going on including video on your blog and website? Let me show you how to use Wondershare Filmora to make this seemingly overwhelming endeavor a breeze. Getting Started With Filmora I will be the first to admit that I was intimidated by the idea of incorporating my own video content into blog posts. I was AFRAID that I would find it frustrating, time consuming, and expensive. Turns out that I was wrong on all counts. First, the equipment needed is much less than I imagined. To shoot a video using just screenshots from computer, literally all that you need is an internet connection and the Filmora software. Want to film yourself along with your screenshots? Just click on the setting in Filmora and it will access your computer's camera or an attached WebCam. I do recommend adding a reasonably priced headset with microphone or stand along microphone to the setup to amp up the sound quality. To shoot video at a location other than in reach of your webcam, a good quality cellphone video camera or video enabled digital camera will do the trick. An external microphone can help cut down on the ambient noise and increase sound quality. Depending on the types of footage that you are trying to capture, you may wish to add in a tripod. Cool tutorials in Filmora's support section show you how to use common household items to help create great video effects. Second, downloading and getting up and running with Filmora happened much more quickly than I had envisioned. I have used a wide variety of software over the years for blogging, and this one ranks at the very top for ease of use. And trust me, using the software has to be a cake walk for me to say that. With the click of a button it is downloaded to your computer. The Filmora 101 Guide lays out in a super user friendly way how to work on your first video clip. And Filmora really does live up to its billing as Quality Video Editing Software for Non-Editors. Third, you absolutely get your money's worth with Filmora software. As you can see where the yellow arrow above is pointing, a free trial version of the software is available. It differs from the full version in that a large watermark will be placed on your video. The trial version will let you test out the software to make sure that it is a fit for you. When you are ready, you can purchase a LIFETIME business license with lifetime updates for just shy of \$120. I would say that is a great deal for all the capabilities that come with this video creation and editing software. Watch Filmora Tools In Action Rocking The Video Tutorial Check out this video tutorial I put together using Filmora to show readers how to save significant money on Amazon. The process was so streamlined and required no technical skills on my part. 1. I used the PC Screen Capture Tool in the Full Feature Mode of Filmora to create this video above. I used a custom screen size rather than full screen. 2. While I was using the PC Screen Capture Tool, I recorded the sound through a headset that came along with my Webcam. 3. I then simply clicked and dragged my video clip into the editor below it. 4. Last, I right clicked on the video segment to pop up slider options that allowed me to adjust the audio volume and quality. Check out the video below to see the steps I took. Use Filmora To Build A Professional Video From Start To Finish In addition to making the simple video tutorial above, you can use Filmora's "non-techie" tools to: Put multiple video segments together into one seamless video. Create your segments using the PC Screen and Webcam tools or do so using a video camera, smartphone or other device. It is easy to import video segments in a variety of common video file formats. You can then click and drag multiple segments into the editor in the order that you want them. Filmora then splices them together so that you don't have the jerky stop and start that you sometimes see in multi segment videos. The software also offers special effects transitions that you can add between segments with the same simple drag and drop principle. Do voice overs for your video. A surprisingly straightforward process. Include motion enabled openers, title overlays, and ending credits to your videos. A good selection of these come built into the software. Add background music to your video. A number of music options come built into the software. Apply special effects to your video footage. Examples include blur out, black and white, mosaic, ripple, and tunnel effect. Add a range of symbols in various spots in your video. From arrows to emojis and everything in between, you can find it to drag and drop in. Include split screen segments where you have multiple video selections going at once on an overall screen. Quickly export your finished product to a computer, Facebook, smartphone, YouTube, or Vimeo. Remember that the Online Help/Support Section offers quick text/video answers for all common video software questions. Can't wait to get started. No better time than now as it is estimated that in a few short years, Internet video traffic will account for over 80% of all consumer Internet traffic. Download your free Cheat Sheet of Ways To Incorporate Video Into Your Blog And Website and start creating awesome video content. What's new in Wondershare Filmora 9 Video Editor? In this post, I list out the top 12 New Features that I like. Hi, this is AdrianLee from VIDEOLANE.COM, where I explore new tools for creating video content faster and better. If you are new here, subscribe and click on all the links I recommend.—What's Filmora9 For many years, I refused to recommend Wondershare Filmora video editing software... until version 9 came along, I loved it so much that I arranged and conducted a live class teaching participants how to use Filmora9. Ok, Filmora9 is not a professional video editing software like Premiere Pro or Final Cut Pro. There is "Filmora Pro" for that. So, Filmora9 is a simple-to-use video editing software that gets your videos edited faster... and it comes with lots of animated text motion graphics (without the need for After Effects). 📍 In the first part of the class, I demonstrate the 12 new features, most of which made me fall in love with the software. Download the complete Filmora9 Video Editing Course for Beginners here.—▶ 12 New Features in Filmora9 Here are the 12 new features in Filmora9 that made me start to recommend this video editor to beginners. Up to 100 Video Tracks - I usually never use more than 10 tracks to overlay or super-impose my videos, so 100 video tracks is a lot of creative freedom.Faster Import and Export - It's definitely faster now. The speed is one of the reasons I never recommended the previous versions. I want to churn out videos fast.High-Resolution Previews and Snapshots - Now I can see in detail what I am editing. At the same time, I can choose a frame and convert it to a high-resolution JPG image. I do that for my YouTube thumbnails.Adjustable Playback Quality - Continuing from the high-resolution preview, I can always switch it back to low-resolution preview, especially when it is too much of a strain to my computer with all my added effects.Enhanced Video Stabilization - Gimbal or no gimbal, I can now adjust the amount of stabilization to match the amount of shakiness in a video clip. Don't rely on this though. Use only as a last resort to save a clip.Enhanced Chroma Key - Green screen or chroma key to replace a green background with another footage. Now it comes with extra adjustable options to make me blend more realistically with the background.Enhanced Audio Waveforms - Whenever I test any video editing application, I look out for audio waveform display. Without it, my editing process will be slowed down by 10 times.Envelope/Keyframe Audio Editing - I consider keyframes as a professional feature, so having it in Filmora9 is an added bonus. I wish they will add automatic audio ducking in the future.Up to 100 Audio Tracks - If we have 100 video tracks, of course, we must have 100 audio tracks. Again, I cannot imagine using more than 5 audio tracks, but then if you are making music, probably.Adjustable Track Size - Accuracy in video editing is looking at your clips in detail and making the track size bigger makes it easier to cut and trim, hence get the job done faster.PC/Mac Cross-Compatibility - I love this one. I hate being tied down to one ecosystem or platform. Just like Premiere Pro, I can continue my editing project from my Mac to a Windows laptop.Adjust Clips within the Video Preview - This feature should have been there since the beginning. Now that it's there, we can adjust our video visually and not have to fiddle with sliders and numbers. So that's the 12 new features in Wondershare Filmora9 (try it free). In the next part of this series, I will show you how to use Filmora9. Download the complete Filmora9 Video Editing Course for Beginners here.— Feel free to reply with a comment or question. Share this post with someone who wants to get started video editing easily using Filmora9. See you in the next one! Adrian LeeVIDEOLANE.COM PS: Join the next Videography and Video Editing Class for BEGINNERS in Singapore...— Join 8030 subscribers...SUBSCRIBE TO MY YOUTUBE CHANNEL— If video isn't already an important part of your content marketing strategy, odds are it's about to be. Web content is taking a turn toward video whether SEOs and content marketers like it or not. Nearly 50% of marketers are adding YouTube and Facebook channels for video distribution in the next year; one third of online activity is spent watching video; and video itself is projected to account for more than 80% of all internet traffic by 2019. 80%! For those looking to continue to grow their organic traffic, that means one thing: Not an expert? Don't know how to edit videos, have a video studio, or have a bona fide video specialist to shoot and cut your features? That's alright! The goal of today's blog is to show you that with the right video editing software, you too can churn out sleek, professional video content—regardless of experience—and keep your content strategy ahead of the curve. Let's dive in! Here are our recs for the top 10 best pieces of video editing software or video editing apps for beginners—from cheapest (i.e. free!) to most expensive. 1. Apple iMovie Ok—so to those of you working with PCs, this one won't really apply, but we'd remits to leave it off the list. If you're looking for simplicity and elegance, it doesn't get much better than Apple iMovie. iMovie's ten high-fidelity filters are some of the classiest in the video editing game; and if you're shooting on your iPhone, or have been editing a project on your iPad, you can use AirDrop to wirelessly and seamlessly transfer your project over to your Mac. One of iMovie's most coveted features is its green-screen, or "chroma-key" tool, which allows you to place your characters in exotic locations—Hawaii, say—at a moment's notice. Want to overlay the scene with "Somewhere Over the Rainbow"? iMovie ties directly in with iTunes and GarageBand, so you can easily implement custom tracks and sounds. When your movie's finally ready to ship, release it into the wild using iMessage, Facebook, YouTube, or any other of iMovie's succinctly connected platforms. Standout Features: Seamless Apple product integration; green-screen; audio and social platform integration Pricing: Free with the purchase of a Mac >>Up your game with our all-star playbook to online advertising.
